

## FAQ

### What are the advantages of the Ultraformer III?

The Ultraformer III utilizes cartridges focused on multiple depths of skin for lifting and tightening the face as well as tightening body tissues for contouring purposes. The patient can receive customized treatments on the face and body with the stable delivery of ultrasound energy, fast application, and precise accuracy of MMFU-powered transducers.

### Are there any side effects?

Although both desired and competitive results for facial lifting and tightening and body contouring will likely show over the course of 3 months after receiving treatment, patients may still experience slight redness for a few hours as well as swelling or tingling in either treatment area of focus for up to a few weeks. There may also be bruising and numbness on treated areas but should resolve 2-4 weeks following procedure.

### Is there any pain during treatment?

The Ultraformer III delivers comfortable procedures with its uniquely-designed transducer system developed only by CLASSYS. Many patients and practitioners report that the Ultraformer III, in comparison with other devices, delivers minimal pain with slight discomfort to the face or body, though sensations quickly subside immediately following treatment.

### Who is a suitable candidate for Ultraformer treatment?

Patients with diverse skin conditions such as fine lines, wrinkles, and hyperpigmentation on the face, or stubborn belly fat and love handles desiring a more curvaceous body figure, serve as ideal candidates for the Ultraformer III. Practitioners can also accommodate both face and body profiles with a variety of multi-depth cartridges that cater to a larger demographic of candidates.

## Advantages

- ✓ Combination of Micro & Macro
- ✓ Multi-depth Focused Cartridges
- ✓ Time Efficient & Convenient
- ✓ No Downtime & Non-Invasive
- ✓ Face & Body Application
- ✓ Customized Treatment Plan

## Neocollagenesis

### Inflammation Phase

Ultrasonic energy heats the deep layers of the skin without affecting the surface of the skin.

### Proliferative Phase

The regenerative response starts naturally, stimulating the production of new collagen that results in skin lifting and an increase in elasticity.

### Remodeling Phase

The collagen formation occurs gradually over 2-3 months and lasts up to 6 months after the procedure.
